

Legal automation in action.

Mewburn Ellis find
a more efficient
way of processing
their invoices using
automation

Background:

Mewburn Ellis LLP is one of Europe's leading intellectual property law firms. It is one of the UK's largest firms of Chartered Patent Attorneys, European Patent Attorneys, European Trademark Attorneys and European Design Attorneys, with offices in London (Headquarters), Bristol, Manchester, Cambridge and Munich.

Challenge:

Invoices needed to be processed faster and with a higher degree of accuracy to alleviate the frustrations and limitations of the team having to manually process circa 41,000 invoice pages per year, using 4 different systems. The team were looking to reduce time, effort and errors associated with high volume, manual business processing.

Solution:

The NexBotix solution combined intelligent software bots to extract, process and move the invoice data from source to the required destination, with the NexBotix Intelligent Automation Hub (NIAH), the management SaaS platform, giving the end users everything, they needed to manage the automation, including data and insights, reviewing the extracted data and approving the bots work in real time.

50% reduction processing time

100% reduction in errors

24/7 automated processing

85% approved invoices straight through

24/7 support from automation experts

“Automated business processes will enable the business to continue to grow while making better use of our employees. Instead of these mundane processes, they can focus on more interesting and value-adding work around the firm.”

Benjamin Oakham. Financial Planning & Analysis.
